

Hey engineering!

Hold scrums on the run

Scrum planning has traditionally relied upon the intimacy of everyone being in the same physical room. Daily stand-ups, where team members exchange vital information about their activities and deliverables, rely heavily on audio and visual communication because, by design, they shouldn't last more than ten minutes.

Today development teams are spread all over different countries and timezones. The greatest challenge for scrum masters and product owners is to have the same offline agile environment in the online world.

It's now possible to reproduce the formal and informal communication styles of agile teams online. Your team can have productive scrums wherever you are with Webex.

Have the agile,
quick sync-ups
that keep your team
moving forward.

- ✓ Access your scrum in your pocket.
.....
- ✓ Foster high-performing agile teams.
.....
- ✓ Reach experts when you need them.

Cisco Webex

Get connected

Create a team with different spaces to reflect the structure of your engineering organization. Give teams and spaces purposeful, descriptive names. Create spaces for conversations with external partners and suppliers. Share links, post burn down charts, and upload velocity reports.

Daily stand up

Schedule HD quality video scrum meetings, for a few minutes to start every day. Webex gives visual reminders that make people show up on time. For ad-hoc meetings with groups, you can call a space and get connected faster

[How to meet on Webex](#)

Run your scrum

Use screen sharing to display product backlog apps and status reports. Over video, you can gauge non-verbal reactions and

engagement. Use the whiteboard to visually co-create solutions.

Keep posted

Use messaging to get answers in real-time from subject matter experts. @Mention the person you need. Use spaces as an open discussion forum and a place to announce deployment progress, collaborate with product owners, and run operations.

Integrate apps

Create some RESTful integrations to DevOps apps to notify everyone of code drops, releases, and test results. Add the integration to a space and invite people who need to know.
