

Maximize IM security and compliance with advanced administration.

Manage and control IM conversations, file transfer, collaboration, and client privileges with Cisco WebEx™ Connect Advanced Auditor.

Store, audit, archive, and review instant messaging communications.

Enable corporate compliance with government regulations.

Maintain secure, trusted instant messaging network.

Provide management visibility into IM usage.

Use with popular email compliance and/or WORM storage systems.

Choose Cisco WebEx Connect Advanced Auditor — an optional WebEx Connect administrative module — to enforce corporate messaging standards and policies, and enable compliance with government regulations to secure, manage, and archive all electronic communications. Augment the security capabilities and business end user functionality of WebEx Connect with centralized, server-based storage and message archive. Create real-time usage reports and monitor statistics graphically.

Implement powerful policy controls — at enterprise, group, and individual levels.

Enable compliance with HIPAA, SEC, e-Discovery, and SOX requirements for retaining electronic communications. You can store, audit, archive, and review all IM communications at the server level. Plus, forward IM conversation transcripts to an email archiving system or WORM-compliant storage as often as necessary. Maintain corporate policies by defining customizable disclaimer notices for individuals or groups.

Reduce the spread of viruses and worms. Protect against IM and P2P threats.

Prevent intruder access with comprehensive identity management. Create a secure IM network by limiting communications within specific domains. Take advantage of advanced security protocols, including patent-pending day zero worm blocking and spIM prevention, powerful file transfer control, and active phrase monitoring and auditing.

Safeguard your network.

Get WebEx Connect delivered on-demand over the Cisco-powered MediaTone™ Network, a private global network. Ensure that all your sensitive communication stays private with end-to-end 128-bit SSL encryption.

Avoid added infrastructure with a hosted solution.

All WebEx applications are delivered on-demand. There's no up-front investment, and no maintenance or upgrade costs. Just a predictable monthly subscription. So it's easy to implement, and easy to scale as your needs change.

Manage IM security and compliance with these powerful features.

Security.

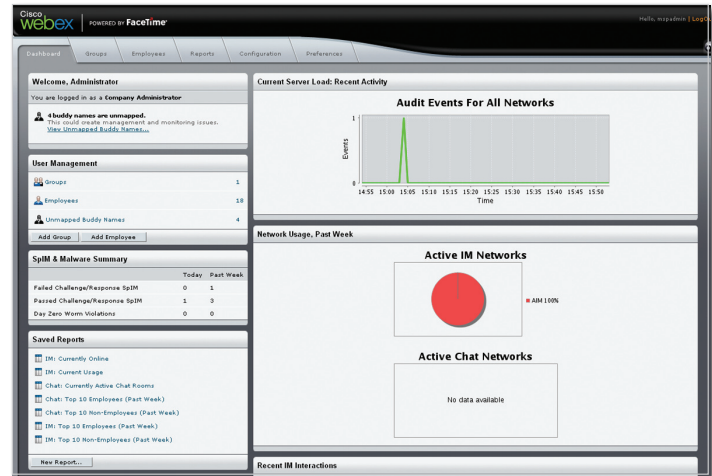

- Block zero-day worm and virus attacks using real-time communications channels.
- Prevent malware from disabling protection and cloak IP addresses with stealth proxy operation.
- Prevent SpIM using a combination of allow/block lists, rich content filtering, and patent-pending challenge-response.
- Limit file transfer size or prevent file transfers altogether.
- Prevent loss of intellectual property and confidential information by:
 - Routing employee communications strictly over the WebEx MediaTone™ network.
 - Blocking messages using keyword watch list, advanced keyword patterns and full regular expressions.

Compliance.

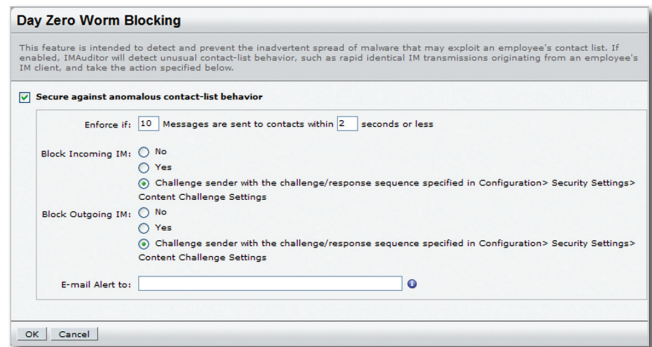

- Guarantee 100% binary archiving accuracy for all real-time communications, including user sign on/off history and multi-party chat participation history and file transfer.
- Display customizable legal audit disclaimers to all parties involved in the conversation — automatically.
- Assign and enforce regulatory compliance features at the company, group, and individual employee levels.
- Configure “Chinese Wall” policies to restrict inter-group contact and use “Hair Pinning” to restrict inter-organization contact.
- Take advantage of sophisticated workflow processes that include content monitoring, review cycles, and custom search queries.
- Integrate seamlessly with common email compliance and WORM storage systems.
- Prevent data tampering with a checksum of time-stamped messages and ensure that exported conversations match recorded conversations.
- Conduct 360-degree audits for all users, including system administrators and content reviewers.

Management and control.

- Manage file transfer, collaboration — including audio/video conferencing, VoIP — and other client privileges at the company, group, and user levels for all real-time communications services.
- Associate employee IDs in the corporate directory with IM contact names.
- Enforce policies based on endpoint IP addresses using IP-based access controls.
- Run usage reports and monitor statistics graphically — all in real time.
- Provide authorized administrators with secure, intuitive web-based access to configuration functionality.
- Integrate with corporate database applications, email compliance, archiving, and WORM storage systems.

Actively monitor and audit activity across all domains in real time using the graphical console.

Take advantage of advanced security protocols to block worms, SpIM, unauthorized file transfers, and other threats.
