

# Extend the power of our MediaTone™ Network into your corporate network.

## Choose WebEx™ Extended MediaTone eXchange (EMX) deployment to:

Comply with strict internal confidentiality policies.

Ensure higher reliability than a server-software solution.

Deploy a highly scalable on-demand meeting application with minimum impact on your IT resources.

Improve the performance of your online meetings.

Contain the cost of delivering real-time communication services.

Keep internal online meeting activity within your corporate network and still enjoy all the advantages of the WebEx MediaTone Network. Get the WebEx Extended MediaTone eXchange (EMX) — and extend the power of our purpose-built global network into your enterprise.

Choose this deployment option and add the performance benefits of an on-premise solution to the outstanding reliability, scalability, and security of service on the WebEx MediaTone Network. You can count on continuous availability as online meetings become increasingly business critical.

### Meet your strictest confidentiality policies.

Get the added security of on-premise deployment and all internal meeting activity takes place within your network. No internal meeting communications are transmitted over the public internet, and no communicated information is persistently stored on any switches inside or outside your network. WebEx provides single sign-on capability enabling seamless authentication of internal network users on the WebEx meeting service without exposing any corporate directory information.

### Boost overall meeting performance.

By extending the MediaTone Network with a local meeting switch, EMX delivers unprecedented levels of performance. EMX shields the corporate network from last-mile internet related performance issues by containing all internal meeting traffic within the corporate network. Plus, it boosts the performance of external meetings by moving all external meeting traffic off the public internet connection and onto a dedicated, redundant, access link to the WebEx MediaTone Network.

### Minimize your IT costs.

EMX is a managed service, provisioned on a WebEx-owned and maintained on-premise platform. There's no high upfront investment, no depreciation, and no recurring personnel costs to worry about. You get a robust real-time multimedia communications solution without adding to the burden of your over-taxed IT staff.

# Get the added benefits of an on-site solution with EMX.

EMX extends the power of WebEx MediaTone Network into your corporate network.

## All this is included with your EMX solution:

- Security review, site inspection
- Site configuration
- EMX build and configuration
- On-site install
- Installation and testing of dedicated mediatone line
- MediaTone failover and overflow provisioning and testing
- Ongoing emx and network monitoring
- 24X7 technical support
- 24X7 customer support
- End-user training on MediaTone Services and Extended MediaTone Services

## Managed Service

Eliminate high up-front capital and ongoing additional personnel costs, and minimize impact on over-taxed IT resources.

## Dedicated MediaTone Connection and Local Switching

Increase end-to-end meeting performance and reduce bandwidth usage and costs.

## On-Premise Switching Equipment

Comply with strict internal data confidentiality policies and keep all internal meeting communication traffic contained within your corporate network.

## Automated Failover

Ensure the highest level of reliability for all your online meetings.

## Platform for Future WebEx Services

Allow rapid delivery of advanced meeting-based capabilities at a lower cost.
