

Cisco Board Pro G2

The all-in-one collaboration board for remarkable, AI-powered video meetings and interactive ideation

Cisco® Board Pro G2 is an integrated video conferencing device and collaboration board that offers a complete hybrid meeting room solution to remove the distance between in-room and remote participants.

It is an intelligent video collaboration appliance combining a dual camera system, built-in speakers and microphones, an interactive touch screen, an AI-powered computing engine, and several mounting options to customize your room experience.

Featuring aesthetic design and premium quality, it's the ultimate room device to power AI-enhanced video meetings, touch-enabled collaborative teamwork, streamlined deployment and scalable cloud management with a single solution.

Supporting Cisco Rooms and Microsoft Teams Rooms, and a variety of third-party productivity tools, the Board Pro G2 is a flexible collaboration solution designed for small and medium meeting rooms, training rooms, huddle spaces, and flexible room configurations.

Bring AI-infused hybrid meetings and teamwork to your spaces

Video intelligence with AI virtual lens zoom enhancement, Frames for multi-participant views, dynamic speaker tracking, multi-stream layout support (coming soon), and multi-camera connectivity for AI presenter tracking

Custom virtual meeting zone creation via local processing to avoid distractions. It intelligently maps the workspace to capture and frame only those in the meeting in glass-walled rooms and open plan room configurations.

Audio intelligence enabling spatial sound powered by multi-channel speaker system, advanced AI noise removal, beamforming microphone array, and directional audio extension with Cisco and third-party IP microphones

When running Webex Meetings, it supports equity and engagement with Cisco AI Assistant, immersive content share, and natural language understanding to provide real-time translation and closed captioning

A complete room solution to reimagine hybrid meetings and ideation

AI-enhanced, cinematic meetings

A blend of meeting room AI and powerful hardware for inclusive audiovisual and rich content experiences.

Seamless deployment and configuration at scale

All-in-one simplicity to deploy anywhere and bring clutter-free, premium design to any room at scale.

Connected teamwork experience

Seamless ideation, annotation and whiteboarding using a variety of go-to productivity tools and ideation apps.

Centralized device and workspace management

Monitor, troubleshoot, and control your deployment while gaining unique workspace insights.

Frame everyone

A 96MP, dual-lens camera system, smart image processing, and AI virtual zoom* work together to capture everyone in the room in high quality, with a focus on the active speaker or representing everyone equally - with longer reach and better visual clarity.

Beat distraction

Powered by an NVIDIA AI engine, you can create custom meeting zones and leverage the power of AI noise removal to beat distraction and keep your teams focused. Enjoy spatial sound and capture all voices in ultra-high quality to include remote participants.

Reimagine teamwork

Using the 55" or 75" responsive touchscreen, two active pens, and deep integration with go-to collaboration tools from Microsoft, Miro, Mural, Webex, and more, you can brainstorm, whiteboard, and annotate on shared content in real time.

Join meetings on any platform

Get the Cisco Rooms experience for Webex Meetings and advanced third-party meeting interoperability with Microsoft Teams, Zoom, and Google Meet, or run an elevated Microsoft Teams Rooms experience on the same device - powered by RoomOS.

Deploy and configure with ease

Leverage multiple mounting options for wall and floor, a mobile wheel stand upgrade, and a premium, standardized design that makes the device simple to deploy and configure across any number of rooms without advanced technical skills and effort required.

Integrate and manage

Connect the device seamlessly with an external PTZ camera, microphones, speakers, external displays, and your laptop. And using Control Hub, you get a single admin portal for unified cloud device admin, advanced monitoring, integration APIs, and workspace analytics.

* Coming soon with future software release.
