

PREVIEW - COMING Q3 CY2026

Cisco Devices for Zoom Rooms

Video conferencing is essential for today's enterprises—driving productivity, enabling hybrid work, and connecting teams across locations. Yet, scaling video across the enterprise is challenging. IT teams face demands to equip more and more diverse meeting spaces, while ensuring a consistent user experience, but without being able to increase their headcount.

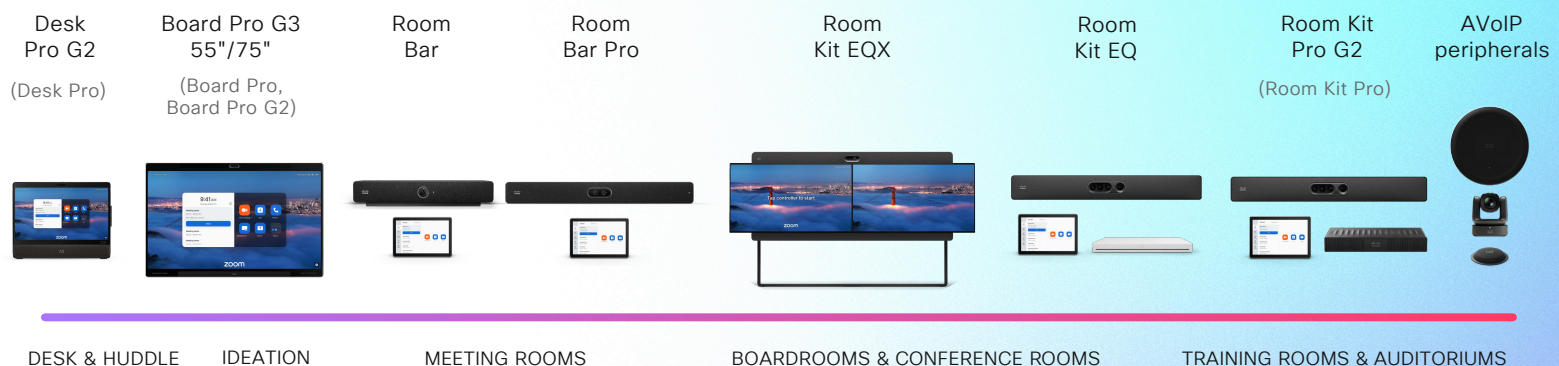

Cisco Devices for Zoom Rooms changes the game, bringing a fully featured Zoom Rooms experience to the AI-powered Cisco devices you love and trust.

A broad portfolio of purpose-built Cisco video bars, room kits, and all-in-one systems covers every workspace from the huddle space to the boardroom and can be efficiently deployed alongside a range of IP-based cameras and room peripherals.

Meanwhile our enterprise cloud management and workspace analytics platform sits alongside the Zoom admin portal, and gives IT additional tools to proactively and rapidly deploy, manage and optimize their video conferencing network infrastructure at scale.

Bring AI-powered Zoom Rooms to any workspace

Make the most of your Zoom Rooms

Equip any space

Explore a full suite of video bar appliances, integrator room kits, all-in-one touch boards, and room accessories for Zoom Rooms.

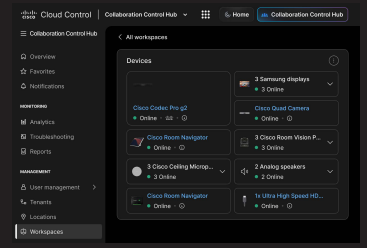

All the Zoom features you expect

Enjoy AI-powered Zoom meetings with all the familiar call controls, layouts, AI assistant, content sharing, and whiteboard features.

On premium collaboration devices

Leverage leading audiovisual intelligence, AVoIP room orchestration, built-in security, and sensor-driven insights.

Manage with ease

Complement Zoom Admin Portal with unified workspace management, monitoring, and workplace integrations

A complete portfolio

Provide a single, consistent collaboration experience across all your workspaces – at the desk, in huddle spaces and meeting rooms, in the boardroom, in the training suite, and in the large auditorium.

Workspace design made easy

Choose from one of our proven workplace standards or customize one of your own with Cisco Workspace Designer, a 3D guided tool with hints, tips and shareable blueprints to reduce costly errors and accelerate deployments.

Powerful Edge-AI

Enjoy more equitable, frictionless meetings with AI-assisted framing, speaker and presenter tracking, noise removal, and agentic productivity features, powered by advanced local processing with NVIDIA™-enhanced AI computes.

Join any meeting. On one device.

Meet with fully-featured Zoom and Webex meetings with no reboot or reconfiguration between calls. Plus, get rich interoperability with Microsoft Teams and Google Meet to enjoy the most advanced multi-platform collaboration.

Simple to deploy

Eliminate meeting room clutter with purpose-built, premium-quality appliances, integrated systems, and self-configuring AV over IP peripherals that are easy to deploy and simple to maintain.

Secure, proven, and trusted

Rest easy knowing that your network, data, and calls are secured by RoomOS, an enterprise-proven operating system featuring robust authentication, encryption, and security protocols.

Unrivalled management and observability

Proactively manage your workplace infrastructure with AI-powered Smart Diagnostics, Workspace Advisor, and ThousandEyes network monitoring, plus rich workspace insights in Cisco Collaboration Control Hub.

Smart buildings integrations

Create a productive meeting environment with automated control of HVAC, lighting, blinds, and custom workflow integrations while featuring sensors for occupancy and environmental tracking.
