

Webex Meeting Survivability

In today's increasingly complex and interlinked business world, unexpected things can and do happen. Network issues, cyber-attacks, natural disasters are unpredictable and can arise at any time. But when such "things" happen to large organizations, vital communications between employees and customers are interrupted, resulting in frequently costly and occasionally even a catastrophic event.

Regardless of the cause, these outages almost always lead to a greater need always on video collaboration – to be able to stay connected, share details, check on status, and ensure the safety of people and property.

Webex Meeting Survivability introduces a new level of network redundancy and business continuity, helping to ensure uninterrupted meetings even during internet disruptions that may be due to outages, natural disasters and more. It is built with resilience in mind and provides the peace of mind, in knowing that you can remain connected both inside and outside of your organization even during emergencies and other unexpected network-impacting events.

Webex Meeting Survivability solution is deployed on the customer's premise and operates in isolation without the need to connect to an external datacenter.

How it works

The Webex Meeting Survivability

- Deploy and manage servers in your site/datacenter. Multiple sites could have their own instances.
- Configure the solution to fit your needs (Persistent Meetings, Blast Dial Meetings, Personal Meetings).
- No user action/download is required.
- Meeting Survivability solution is always on. Whenever an event occurs, you can make the switch to the survivable solution.
- Seamlessly join meeting via a browser. Network connection to the site/data center is required.

Meeting features supported in survivability mode

- Isolated, secure deployment model in customer's site/ datacenter
- High quality video, audio and content share
- Simple join experience via any supported browser
- Persistent meetings
- Blast dial meetings for emergency scenarios
- Simplified provisioning of personal meetings for individual users
