Small Brainstorming Space Guide

### Introduction

## Overview and Intent

This document provides guidance on creating the Small Brainstorming Room, including space design, technology, and furnishings.

The intent of these Cisco Design Guides is to help organizations drive a repeatable and standardized approach to deploying collaboration spaces, leading to lower implementation costs, quicker deployments, reduced solution complexity, and easier maintenance and support. Most importantly, the designs outlined in these documents will deliver an amazing experience for both in-person users of the space, as well as those participants connecting remotely.

The specifications and details in this document reflect how Cisco has approached the creation of these types of spaces in our own office environments. This should not be interpreted as a "validated design." Every project is different, therefore, assembling a multi-disciplined team of experts is critical to ensure success. This includes, but is not limited to, internal IT and facilities teams, architects and space designers, acousticians and lighting designers, and a Cisco-certified integrator. These individuals need to be brought in at project inception to understand end-user requirements, assess the technical environment, and evaluate the attributes of the specific space, including overall layout, physical structure, accessibility, acoustics, electrical and mechanical systems, and external factors such as noise, light and temperature.

### Room Description

The Small Brainstorming Space comes in two different furniture configurations: standard height and counter or bar height. This space can be deployed both in an enclosed room or in the open plan.

Regardless of the deployment approach, the Cisco Board Pro 55 is the proper device for the space, enabling video calling, sharing of content, and whiteboarding/co-creation.

### Video Device Mounting Options

#### Standard Height

If the wall is blocked, the optimal solution is to use a manual or electric adjustable mount, allowing end users to use the device in both a standing and seated position. If the wall is not blocked, then there are floor stand units that sit directly on the floor, and are tethered to the wall, which address this issue. If the device will only be used in a standing position, the wall mount kit from Cisco is the best solution.

#### Counter and Bar Height

With a table height greater than 36" (91 cm), the best option is to mount the device directly to the wall using the Cisco Board Pro 55 Mounting Bracket. This approach requires the wall to be blocked and electrical and data to be elevated; if this is not possible, a low profile, A/V compatible credenza can be used to deploy to support the device.

### Room Layout

The furniture shown in this design is there to indicate the scale of the space. The selection of specific furniture elements should be based on local preference and how the room is planned to be used.

### Room Elevations - Standard Height Furniture Option

#### **Construction Elevation**

\* 11-Ply (or similar approved), prior to screen installation. Steel fixings must be able to support screen specifications. Wall should be made good to match existing wall finish.

#### Front Elevation

#### Side Elevation

### Room Elevations - Counter or Bar Height Furniture Option

#### **Construction Elevation**

#### **Front Elevation**

#### Side Elevation

### **Acoustical Treatment**

Installation of an absorptive ceiling, through the use of acoustic ceiling tiles, as well as the addition of acoustical panels to two adjoining walls within the room (preferably opposite the device and away from the entry location) is highly recommended.

### Power & Data

#### **General Specifications**

Power and data requirements need to be verified for each project. Provide video device power and data even if the project plan does not include it on day one. Based on the design of this space, core drills and floor boxes will not be required.

#### Power & Data

Provide one (1) duplex power outlet and one data receptacle with two (2) ethernet ports on the wall behind the video device. Their location is dependent on the mounting option selected. Specific locations should be confirmed with the mounting provider.

### Exploded IT Diagram

#### Cisco Room Navigator for Table (Optional)

The recommended approach is to connect the table stand Cisco Room Navigator directly to the Cisco Room Bar using a network cable (requiring core drilling).. The two can also be connected over the IT network if an ethernet port is available under the table.

#### Cisco Room Navigator for Wall (Optional)

It is recommended to run the cable inside the wall or through the door frame directly back to a network switch.

#### **Table Top Charging**

USB-C charging and convenience outlets on table top. Ensure the size of the trough and layout can accommodate a variety of laptop power supplies.

#### Wall Blocking

Required when the device is wall-mounted. The size and composition of blocking materials should be determined based on the overall weight of the solution deployed.

#### Core Drilling

Not required unless HDMI/USB-C cables are present for content sharing, and/or if a Cisco Room Navigator for Table is used and directly connected to the Cisco Board Pro 55.

#### Cisco Products - Cisco Board Pro 55 Option

- CS-BRD55P-K9 Cisco Board Pro 55

• CS-BRD55P-WMK= Cisco Board Pro 55 Wall Mount

(for bar or counter height option)

• CS-T10-TS-K9= Cisco Room Navigator for Table (Optional)

- CS-T10-WM-K9= Cisco Room Navigator for Wall (Optional)

#### **IOT Devices**

- IAQ coming from the Cisco Board Pro 55
- Occupancy sensing is coming from the Cisco Endpoints
- Suggested lighting specifications: 220LPW raw, 140LPW delivered
- Ensure Collaboration device is not plugged into ASHRAE 90.1 outlet

#### External microphones and speakers

Mic and speakers are embedded in the Cisco Endpoints. No additional mic or speakers required

### Commissioning-User Acceptance Testing (UAT) Criteria (Sample)

proper presence status

#### **OT/Space Testing** IT Testing Verify manual adjustment of lights, shades and Internet connectivity of Cisco Collaboration device environmentals are operational from wall controls Initiate test calls on video endpoint (or Board Pro, Webex app and voice controls) Confirm lighting occupancy sensor is functional Check any tabletop power and data functionality Validate environmental metrics are being displayed on collaboration device and Room Navigator Verify any smart buildings integrations are working properly Confirm help videos are loaded Confirm occupancy beacon function is correctly working on Cisco Room Navigator for Wall Verify the Cisco Smart Workspaces display is showing
